

Fluid and Thermal Mechanics

Expérimental Fluid Mechanics

IDENTIFICATION

CODE : GM-5-S2-EC-MEMFE
ECTS : 3.0

HOURS

| | |
|---------------------------|--------|
| Lectures : | 0.0 h |
| Seminars : | 20.0 h |
| Laboratory : | 12.0 h |
| Project : | 0.0 h |
| Teacher-student contact : | 32.0 h |
| Personal work : | 10.0 h |
| Total : | 42.0 h |

ASSESSMENT METHOD

Written exam & reports

AIMS

- Have an overview of the advanced experimental methods used in the fields of fluid mechanics and heat transfer.
- To allow R & D engineers interested in the preparation and implementation of experiments for the determination of physical quantities [such as velocity, pressure, concentration and temperature] to choose the appropriate instrumentation.
- Also master the processing of the results, their interpretation as well as the dimensional analysis.

CONTENT

Emphasis will be placed on measuring instruments specific to:

- Scalar quantities: flowrate, pressure, temperature; concentration...
- Vector quantities: velocity; turbulence, Shearing ...

Presentation of non-intrusive optical measuring techniques:

- Doppler laser anemometry,
- Particle Imaging Velocimetry (PIV),
- Planar Laser-induced fluorescence (PLIF),
- Visualization by Digital Holography

Data acquisition systems;flow visualization.

Hot Wire Anemometry.
