

Human and Social Sciences

Energy

IDENTIFICATION

CODE : GEA-4-NRJ
ECTS : 2.0

HOURS

Lectures : 0.0 h
Seminars : 26.0 h
Laboratory : 0.0 h
Project : 0.0 h
Teacher-student
contact : 26.0 h
Personal work : 10.0 h
Total : 36.0 h

ASSESSMENT METHOD

Restitution of a collective work
[pair-trinomial] at the end of the
year of the controversy mapping
type, analysis of an energy mix...

TEACHING AIDS

- lecture notes [in french]

TEACHING LANGUAGE

French

AIMS

The aim of this course is to understand energy in all its forms, and to learn how to model energy exchanges within a system. Following this course, students should know how to analyze an energy need, make informed design and sizing choices, know how to assess the overall footprint, in particular the impacts in terms of resources, pollution and societal choices. This transversal course will be also an opportunity for students to understand that the energy problem is at the heart of all the disciplines of the electrical engineering.

CONTENT

Energy is an issue for the future of mankind. The history of humanity has been shaped by the discoveries of new sources of energy (fire, water power, fossils ...). The impacts of these discoveries have changed the physical world but also the organization of our societies. Awareness of planetary limits and the climate crisis are forcing a profound change of course. The citizen engineer must participate in this transition. This course aims to provide our future engineers with the basics and the physical concepts necessary for thinking, modeling, understanding, and designing an energy system in a context of transition and changes in our societies.
